

Learning from KT session

1st-Day-KT-23-09-2022

HDFC bank project (NET BANKING)

Location under :-

- Mumbai
- Chennai
- Hyderabad

Required skill :-

- angular Js(JavaScript use in angular Js component base language)
- JavaScript
- html css bootstrap

SIT:- system integration engineering/testing bug will be resolve in SIT, developing mode only tcs tester are tested sit changes

UAT:- user acceptance/application testing real world person banking person test on site and test by tcs side also.

Where bug register ?

search in **Jira** hdfc bank & **rbnb-\$** bug only for net banking. Jira is tool where bug are listed.

How system work ?

bug in Jira-->sit/local machine-->(intel j)universal collection-->update program-->go to bit bucket-->git(your branch to sit580 branch -->check by tcs tester-->uat/seamless-->pass -->CUG/preprod-->bank person QK bank tester-->production environment-->live person data test

bit bucket cloud base service we can track and control the changes to our code

git pull origin daily for particular / local branch SIT/UAT

-----*****-----

2nd-Day-KT-26-09-2022

Widget => code single use code

Features => multi purpose code that use for mainly times

*Controller binding from html length small call mainly

*Service main business logic code in service large length

specific transactions use for one controller & one service 1 html file

bit bucket all code here global collection --> release/NB-SIT580

pull request local to global branch (release/NB-SIT580)

NB -> template present under NB for checking code is working or not.

new branch :- git checkout -b branch-name

every morning you must do it :- **git pull origin release/NB-SIT580**

git gui :- use to check what change you do currently it appear on screen

-----*****-----

3rd-Day-KT-28-09-2022

SPA single page application design by angular js single page html present in one html all file do not change any thing inside index.html only change related CSS is in Assets =>base.css

- pre session login page is attract customers purposes
- post login => net banking

ads on site inside a project is called banner

- liability(MUMBAI), open, market type
- EPI for Hyderabad , Chennai

basic navigations controller

- navigation go {notation->forward}("where you want to implement")
- navigation back {notation->backword}("where you want to implement")

common navigation service dependency inject first then use nav comp.

- go()
- back()
- subscribe()
- .state
- .reset previous state

Click on widget and search with this key **Ctrl+Shift+f** for search in intellj in particular topic

-----*****-----

4th-Day-KT-29-09-2022

Factories :- use to write a code for reusable purpose.

Inspect customer id --> check ctrl attribute is component factory is code that use for every ever only use inbuilt function

- clearerrormessage
- customerIdText
- on blur function
- on focus focus on element
- custom Validation *etc.
- (validation) regex pattern

customer validate service in network in inspect mode.

send a backend to validate customer and provide access to front end.

service+* we can use only post method.

- error code 1 is failed .
- error code 0 it means ok all is good.
- git status --> check status or local files.
- git stash --> clearing none unnecessary changes will be remove from local repo.
- git gui --> for change checking purpose.
- checkout go to master branch.

we can create a branch by using BITBUCKET also.

format pf commit message:- Jira ID : parent cr(change request)-Jira description then commit.

debugging :-

current in network we can see latest service.

sources-->statics-->scripts -->widgets and features.

always go with controller name its not same.

5th-Day-KT-04-10-2022

theme is colour logic given in 'theme' in universal collection 580, less file also in theme

4 css file base.css

min.css file is use to reduce a file size of code less reload time website

script is angular Js part

template template.html

xml contain property of files

common level image put in theme folder instead of widget

success message writing in success sticky bar message written in common

generic class written in hdfc portal .less

common CSS class use in .less file theme ->style- >NB->.less

popup code in new model. Less & modal .less

theme in exp -dashboard under setting under manage by syed team

master page -->temp nb master page

.soy:- template is back base just a templating system dynamic template reusable template in soy html template but not like that

its use for client side a and server side also

preload script is use to load each page as a pre load when we open sit or production sit

init.js in master page script is use for initially for page load

generic components write in master page /common function written in script in main.js

prebuilt common file store that use repeatability
